

VULNERABILITY & PATCH MANAGEMENT

Actively track & fix vulnerabilities across all your endpoints

Timely patching of applications and operating systems remains critical for preventing security breaches, but is still one of the most time-consuming tasks in IT. Growing IT complexity can also lead to degraded coordination among cross-functional teams, gaps in inventory, and restricted visibility of the threat landscape.

ESET Vulnerability & Patch Management, with automated vulnerability scanning, instant reporting to the console, and numerous filtering options, enables you to prioritize vulnerabilities based on their severity, meaning you can effectively manage security risks, allocate resources and focus on critical security issues.

With automatic and manual patching options, customizable patching policies, advanced prioritization techniques and automated workflow tools, your endpoints and applications are updated with the latest security patches in a timely manner, giving you improved control and oversight over your systems.

ESET Vulnerability & Patch Management is integrated into the ESET PROTECT Platform, which provides you with wider, enterprise-grade protection against malware of all types, including ransomware, and zero-day threat prevention across all endpoints, servers, and emails—all via a single, unified solution. Benefit from unique prevention, detection and response capabilities, reduce IT complexity, and get complete visibility into the security posture of your organization.

Key Benefits

AUTOMATION

Reduce time-consuming tasks and ensure timely patching

Automated scanning of your endpoints' software and third-party applications, with instant reporting to the console, provides immediate visibility of vulnerabilities. To ensure continuous protection for your business, you can configure auto-patching by selecting a patching strategy (all, only allowed, or all but excluded) and defining specific time slots for when patching should occur.

CUSTOMIZATION

Simplify your patching process and maintain control of your systems

Select automated or manual patching according to your own schedule in just a few clicks, based on easily-adjustable rules. Customize your patching policies to prioritize critical assets by manually addressing severe vulnerabilities, and automate the patching of other assets to take place at off-peak times to avoid interruptions.

ORCHESTRATION

Enjoy a complete overview, and minimize your exposure to threats that go beyond software vulnerabilities

The ESET PROTECT Platform augments ESET Vulnerability & Patch Management with unique prevention, detection and response capabilities, maximizing overall security. Get a complete picture of all the security risks that your organization faces—in one place.

Progress. Protected.

Key Features

VULNERABILITY ASSESSMENT

- Scans thousands of applications, such as Adobe Acrobat, Mozilla Firefox and Zoom Client
- Detects over 35,000 common vulnerabilities and exposures (CVEs)—and growing
- Automated scans with customizable schedule settings
- Prioritizes and filters vulnerabilities by exposure score and severity
- Vulnerability reports of most-vulnerable software and devices
- Supports multitenancy: visibility over vulnerabilities in specific parts of multisectional organizations
- Database of vulnerabilities, CVSS 2.0 and CVSS 3.1
- Unified overview via the ESET PROTECT Cloud console, with multi-language support and light demands on your IT infrastructure

PATCH MANAGEMENT

- Launch immediate updates and patching via customizable options, or manually
- Simplify your patching process: prioritize critical assets and schedule the remainder for off-peak times to avoid interruption
- Register and track exceptions for patches of selected applications
- Provides an updated inventory of patches with patch name, new version of app, CVE, patch severity/importance, affected applications
- All patches available via the ESET PROTECT Cloud console

Specific Requirements

ESET Vulnerability & Patch Management can be managed via the ESET PROTECT Cloud console with ESET Endpoint Security for Windows 10.1 and later.

The ESET PROTECT Cloud console facilitates endpoint deployment, configuration through standard policies, the processing and visualization of relevant data, and the execution of remediation actions such as automatic or manual patching of vulnerable applications.

ESET Endpoint Security is responsible for scanning vulnerabilities and patching applications. ESET Vulnerability & Patch Management is fully integrated with ESET Endpoint Security, so no additional agent is required.

How to buy:

The ESET Vulnerability & Patch Management capability comes as part of these solution tiers:

 PROTECT ELITE

About ESET

WHEN TECHNOLOGY ENABLES PROGRESS, ESET IS HERE TO PROTECT IT.

ESET brings over 30 years of technology-driven innovation and provides the most advanced cybersecurity solutions on the market. Our modern endpoint protection is powered by unique ESET LiveSense multilayered security technologies, combined with the continuous use of machine learning and cloud computing. Backed by the world's best threat intelligence and research, ESET products offer the perfect balance of prevention, detection and response capabilities. With high usability and unparalleled speed, we are dedicated to protecting the progress of our customers, ensuring maximum protection.
